

Web - Security

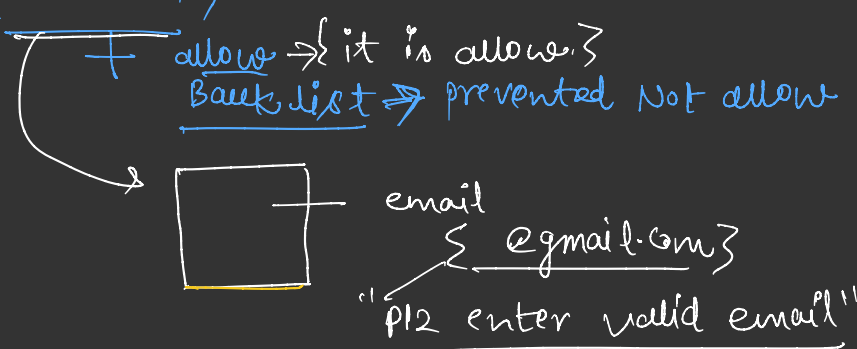

1. client side security
2. security in Transition
3. Third party security
4. server side security.

④ client side security

4. XSS → {cross site scripting}

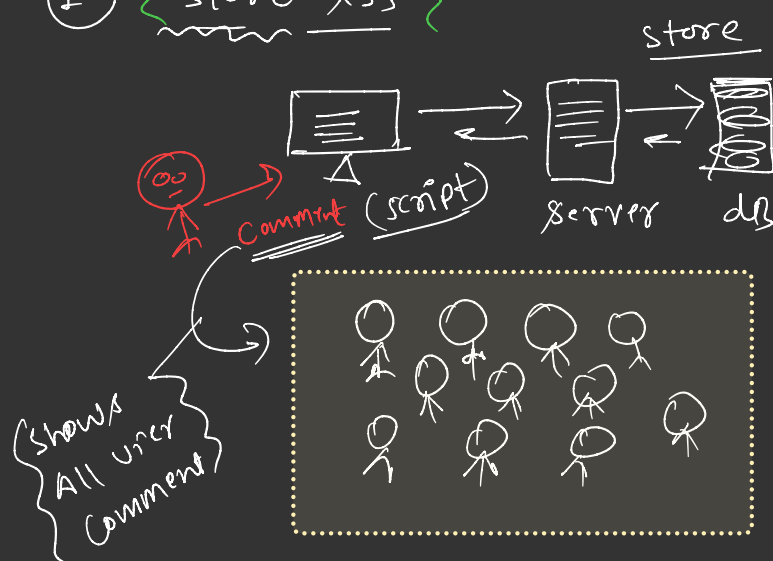

• {validation}

* client side validation: validation (check)
apply at client (frontend level) -

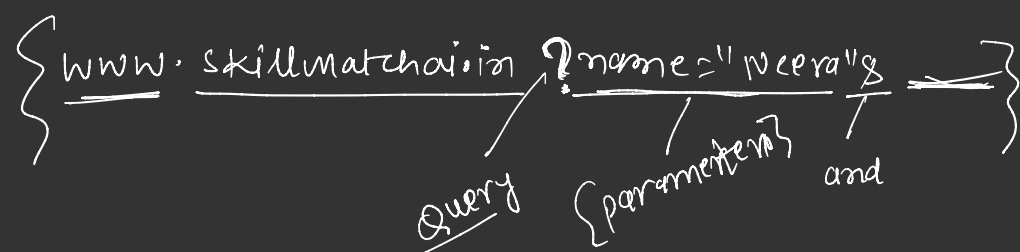

classification of XSS (cross site scripting)

① {store XSS}

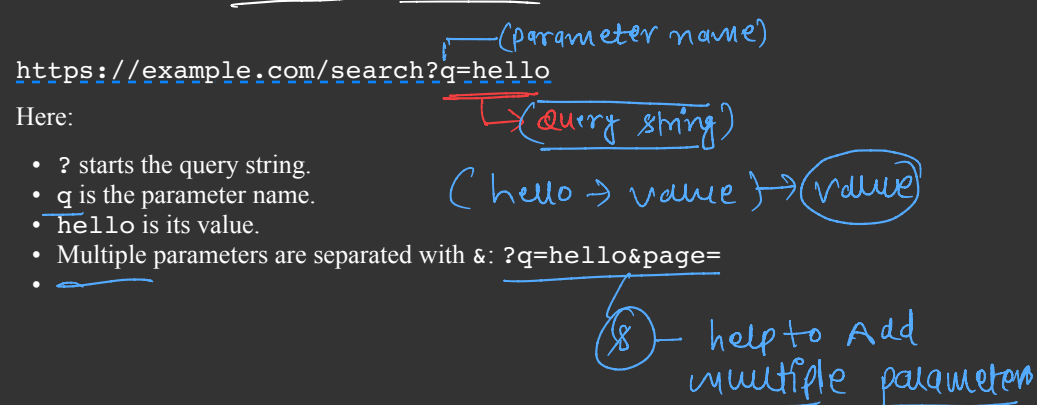

② {Reflected XSS (cross site scripting)}:

(Query parameters)

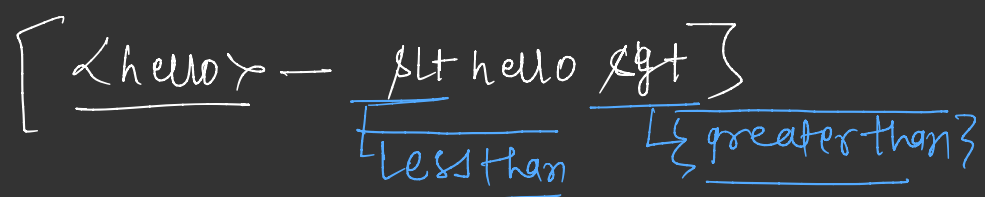

* Attacker do Action at url (Query parameter-level)

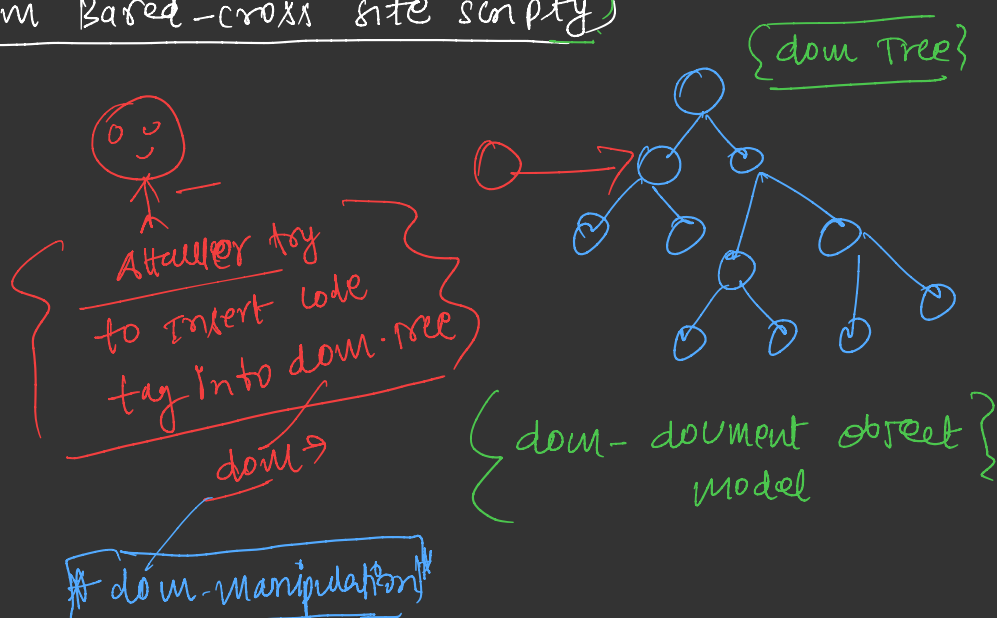

{Escaping}

+ it basically convert special character into a form that treated as normal text

③ {dom Based-cross site scripty}

DOM-based XSS happens entirely in the browser when client-side JavaScript takes **untrusted data** and puts it into a dangerous DOM/API sink.
